

ENVIRONMENTAL POLICY

In striving to be a Company of Excellence, our Vision includes a commitment to “Be a Good Neighbor in our Communities,” which includes operating our business in a way that reflects thoughtful environmental management.

As a leader in the Green Industry, we are mindful of the important role that we play to protect our environment in a sustainable manner. We are committed to [1] conducting our operations in a manner that is protective of the environment and of our natural resources through compliance with all applicable laws and regulations, [2] creating environmental awareness with our stakeholders and consulting with those stakeholders on environmental issues, [3] implementing an environmental management system framework to review, monitor, measure, evaluate, and improve the company’s environmental performance, [4] using energy and natural resources more efficiently, including a commitment to reduce water use, [5] reducing our emissions and waste and [6] reporting regularly on environmental issues and monitoring our environmental performance through our annual IMPACT Report.

Our environmental policy applies company-wide, including all of our subsidiaries, business operations and facilities, regardless of location. We encourage our suppliers to make the same commitments that we do regarding environmental impact, through compliance with all applicable laws to reduce our collective impact on the environment.

This policy has been approved by senior management of the company.
